**-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --**

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on February 19, 2004 has been entered.

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 3-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Japanese Patents 03177498 and 02097596 (hereafter JP '498 and '596) in view of Yuan et al. and Miyano.

Both of these Japanese references teach a metal working fluid for a metal working process (e.g., cutting, grinding, roll forming, etc.; see JP 0377498 abstract) comprising a microencapsulated liquid admixed with a second liquid. While JP '498 and '596 differ from the instant claims in not specifically teaching that the metal working fluid is recirculated, recirculating the working fluid is extremely well known in the art as evidenced by Miyano, U.S. Patent 5,800,104 and Yuan et al., U.S. Patent 5,792,728, which teach metal working processes wherein the working fluid is recirculated for subsequent working of the workpiece.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to carrying out a metal working process as taught by JP '498 and '596 wherein the working fluid is recirculated for subsequent working of the workpiece as taught by Yuan et al. and Miyano.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Molnar, U.S. Patent 6,293,851 B1, teaches a CMP process wherein the lubricant is preferably free of an encapsulated lubricant (column 5, lines 38-42) and is stable to recycling conditions (column 16, lines 59-61).

Applicant's arguments with respect to claims 3-6 have been considered but are moot in view of the new ground(s) of rejection.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jerry D. Johnson whose telephone number is (571) 272-1448. The examiner can normally be reached on 6:00-3:30, M-F, alternate Fridays off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Glen Caldarola can be reached on (571) 272-1444. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
